Objective

Experienced problem-solver in complex situations with a proven track record of delivering meaningful results. Seeking to apply a passion for Computer Application Development to a co-op/full-time opportunity starting May 2022.

Highlights of Qualifications

- Use Mac OS and Windows operating systems for the development and implementation of web applications.
- Implement system development analysis and the Systems Development Life Cycle using different UML diagrams.
- Utilize team collaboration, version control and bug tracking systems with Postman, Azure, Jira, Github.
- Provide interface technology with programming skills from: C#, HTML, CSS, JavaScript ES6+
- Learning web application development using a combination of ASP.NET MVC5 Framework adapting concepts previously learned from Ruby and Ruby on Rails.
- Knowledge in relational and non relational databases with use of MySQL, MongoDB and Firebase.
- Design, develop and release unique user interfaces using HTML, CSS, Expressjs, Nodejs, React, Heroku and Nginx.
- University of Waterloo Alumni with over 10 years of customer service experience in Retail and Finance.
- Shows compassion and positivity while confidently interacting with team members in an agile environment.
- Exceptional interpersonal and communication skills actively listening with fluency in English and Persian.
- Proactive on continuous learning, searching and reading new docs when tackling new challenges.

Project Work

Kinthera - Web application (<http://kintherapist.ca>)

- Full stack deployed Capstone application matching Clients to Therapists based on Kinthera's matching algorithm.
- Built with backend Node.js, Express.js and frontend React hosted on a CentOS linux server with Nginx acting as the reverse proxy and PM2 Runtime acting as a production process manager for Node.js.
- MongoDB is being used as the non-relational database and Google Maps Places Autocomplete API is integrated on the frontend.

YelpCamp - Web application (<https://myyelpcamp123.herokuapp.com>)

- Full stack deployed application using Node.js, Express.js, and MongoDB that reviews different campgrounds with CRUD functionality within a user permission framework.
- Delivers security with user-authentication, geo-coding (cluster mapping) for different campsites, and image uploading.

Education

Computer Applications Development Post-grad Co-Op Program

Conestoga College, Waterloo, ON

Sept 2021 - Sept 2022
